Steps to Create Angular Application

Step 1:

Open Command prompt

Step 2:

Select specific location for project folder

If you want to create project folder on Desktop then go to Desktop using **cd** command as **cd Desktop**

Step 3:

Create new project using this command as

Ng new MarvellousDemo

Step 4:

After this command answer the below question as

Would you like to add Angular routing? (Y/N)

Enter N

Step 5:

Now answer below question as

Which stylesheet format would you like to use? (Use arrow keys)

➢ **CSS**
SCSS [http://sass-lang.com]
SASS [http://sass-lang.com]
LESS [http://lesscss.org]
Stylus [http://stylus-lang.com]

From the above options select CSS using arrow keys.
Now folder gets created on Desktop as MarvellousDemo

Step 6:

Go to the project folder as using below command

cd MarvellousDemo

Step 7:

Now start development server as

ng serve

By default, our application gets started on port number 4200

To change that port use below command as

ng serve –port 9900

Step 8:

Now we can check our application using browser

http://localhost/4200   **or**   **http://localhost/9900**
